- 42" Circular Kit small groups \$196
- Refl. Kit 28x44" , 71 x 112 cm groups \$196
- Rect. Kit 36x48", 92 x 122 cm groups \$189

## 5 Reflector Surfaces - Offers 6 Solutions

Digital cameras prefer fairly soft and flat lighting so for location use, Reflectors are wonderful. To really soften sunlight, use translucent panel for filtering light. This will make an enormous difference to the quality of your image. For gentle fill, use the white cover for your reflector, and for strong fill light, silver is best. When working in the shade where the light tends to be blue, use gold and on overcast days use the black subtractor overhead to minimize hot spots on noses, cheeks, etc.

## 42" 4 IN 1 REFLECTOR KITS- JUST \$159

GOLD-SILVER-BLACK-WHITE

PLUS- Reverse the silver/gold cover to add a fifth reflector of a different quality light fill.

Much the same applies when working Indoors using a continuous light source or a flash, so you can use reflector sets on location or in your studio. In the studio, use a smaller reflector such as a 32" or 42" size as these are easier to handle. With a reflector mounting bracket you can work solo, by attaching your reflector to a tripod or light stand for easy positioning. When working with full length models the larger Reflectors are best. You can also use more than one reflector to improve modeling.

## REFLECTOR MOUNTING BRACKET

Fits All MADSENS Reflectors  
Item: 260020

The Reflector Mounting Bracket allows you to attach any of the reflectors to a Lightstand or tripod and adjust the angle of the reflector to suit your work.

Use In Studio  
Or On Location  
Only \$109.00

Attaches To  
Reflectors
